Natural Environments in Early Intervention Services

What Are Natural Environments?

**Natural environments are:**

- A variety of settings where children live, learn, and play
- Home (family life) and community-life settings that are natural and typical for children without a disability and their families
- Settings where the child, family, and care providers participate in everyday routines and activities that are important to them and serve as important learning opportunities

**Family Life:**

Daily routines, play activities, household chores, entertainment, rituals, celebrations, and social activities

Examples of family-life environments: Kitchens, bathrooms, playrooms, bedrooms, backyards

Examples of family-life activities: Eating, bathing, infant and toddler games, reading, walking, doing laundry, gardening, birthday parties, visiting families and friends

**Community Life:**

Family activities and outings, going on errands, play activities, community events, outdoor activities, participation in church/religious groups and/or community organizations, sports activities/events

Examples of community-life environments: Playgrounds, parks, libraries, places of worship, childcare facilities, neighborhoods, stores, restaurants, and transportation to and from activities (car rides, bus rides, train rides, etc)

Why Are Natural Environments Important?

**Natural environments are important because they:**

- Are included in the law (under Part C of the Individuals With Disabilities Education Act)
- Support families in promoting their children’s development, learning, and participation in family and community life
- Emphasize children’s, families’, and care providers’ abilities during everyday activities, rather than teaching a new skill out of context
- Focus on function and socialization with an indirect benefit of raising awareness of disability, empathy, and promoting friendships
- Promote learning in locations where the child will use the new skills
- Enable families and therapists to identify facilitators, barriers, and constraints to skill acquisition in the typical setting in which the child will be using or executing this skill
How Do I Make Sure I Am Using Natural Environments for Early Intervention?

- Establish rapport with families
- Ask families and care providers what activities and routines are part of their daily lives
- Invite and encourage families and care providers to identify their priorities and outcomes as an initial step in the planning process
- Identify the important people in the children’s and families’ lives
- Observe children engaging in real-life activities with families and care providers across natural settings
- Provide families with emotional, informational, and material resources to support the achievement of Individualized Family Service Plan (IFSP) outcomes
- Provide physical therapy within the context of family and child routines and activities
- Be a resource for families to network with other families in the community
- Learn about your community, especially formal and informal activities for young children
- Seek out additional resources, supports, and networks by contacting regional resources through the APTA Section on Pediatrics Early Intervention Special-Interest Group (information is located online at www.pediatricapta.org under Special-Interest Groups)
